

Stream'IN Platform

Integrated secure document
services

Hybrid Document Management

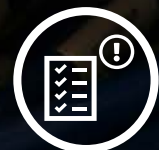

Document Management is crucial for businesses drowning in paper-based processes.

In the digital age, its importance lies in enhancing accessibility, collaboration, and security while reducing the risk of data loss. Digitization eliminates physical storage constraints and enables remote access.

However, piecemeal solutions often create interoperability issues. A comprehensive hybrid solution seamlessly merges paper and digital workflows, providing a unified platform. This ensures the efficient transition from traditional to digital, maximizing productivity and safeguarding sensitive information in an integrated, secure environment.

- Reduced costs
- Streamlined workflows
- Enhanced collaboration
- Increased productivity

STREAM'IN PLATFORM

Stream'IN Platform

Integrated secure document services

Stream'IN platform, a suite of digitized document services, addresses large-scale document management, digitization, distribution, and validation needs of governments, public authorities, and enterprises.

Compliant with regulatory requirements and global best practices, our solution ensures that every stage of the document processing journey is executed with precision and security.

- Easy management with a single, centralized platform
- Complete traceability with legally valid proof of delivery
- Enhanced data security to mitigate data loss or theft
- Data stored and processed in France

How does it work?

With Stream'IN platform, customers can manage document flows, processing, and distribution all from a single solution.

- **Acquisition Hub** accepts documents across formats from multiple channels such as CSV, XML, Flatfile, Databases, Legacy Systems, etc.
- **Monitoring Portal** allows users to monitor requests, create statistics and reports, and ensure end-to-end traceability.
- **Publishing and Processing platform** composes files and standardizes the address block so that the document can be used for distribution.
- **Multi-channel distribution** allows messages to be distributed through various digital channels, including notifications regarding file transfers, successful deliveries, failed attempts, etc.
- **Digital Archiving** enables instant retrieval from the central document repository

ACQUISITION HUB

Sender

- Batch flow & API
- Deposit portal
- Printer Manager

PROCESSING PLATFORM

Monitoring portal

- Statistics and reporting
- Notifications and alerts
- Evidence consultation
- Traceability

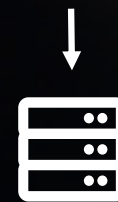

The platform

- Document creation and security
- Centralized file management
- Digital and/or physical option
- Document security (QR code)

Blockchain anchoring

Cutting-edge solution for hybrid paper management

Stream'IN bridges the divide between physical and digital document management with streamlined workflows, robust collaboration tools, and efficient paper-to-digital transitions.

Revolutionize your document management with a platform that combines the tangible benefits of paper and the agility of digital solutions all in one.

Complete digitization service

End-to-end services from personalized production to distribution

Faster processing, reduced costs

Bulk operations and flexible processes result in increased efficiency and reduced expense

Expert support

Dedicated support for daily operations and change management

Legal & regulatory compliance

Digitization processes aligned to regulatory requirements to produce secure and legal documents

Single-piece email

Gradually-generated stream of letters and mailings elude industrialized and automated production. To prevent senders from having them stamped at the single-piece rate, we offer an electronic approach.

- Substantial savings for all types of mail: postal, digital, regular, or registered
- Complete flexibility with no restrictions on volume and subscription
- SIAF-approved service for physical and digital archival

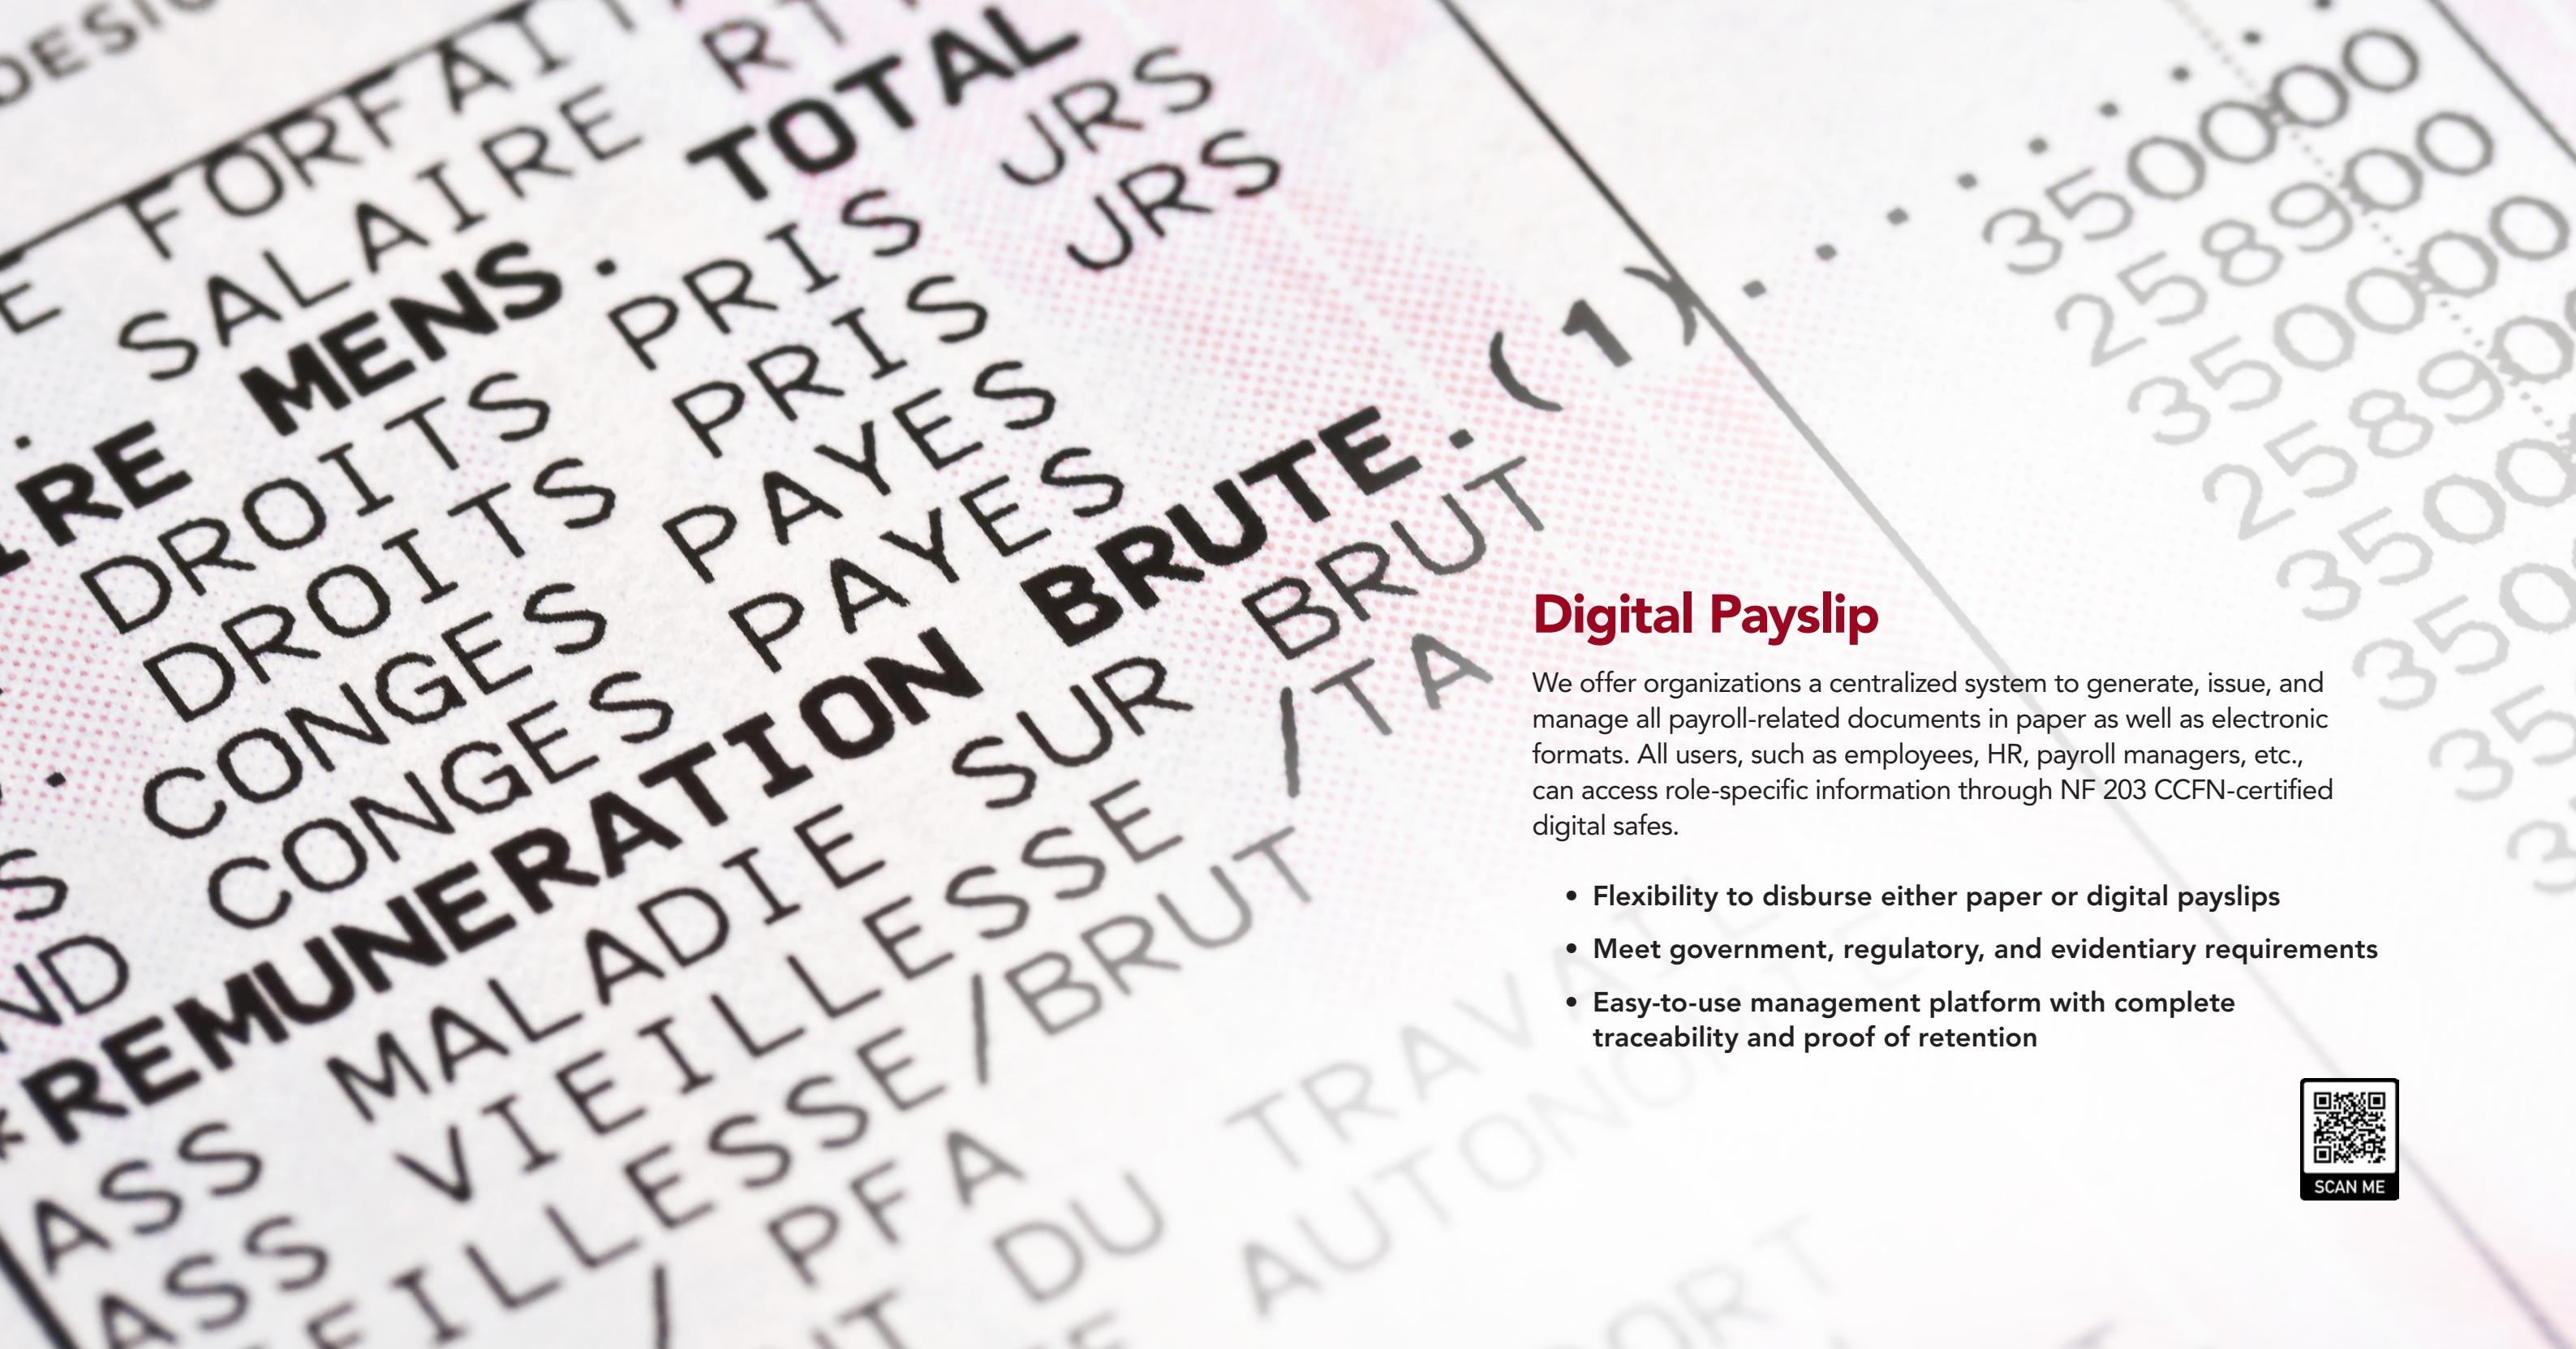

Electronic Registered Letter

ERLs hold the same legal value as paper-based registered letters while adding immense value in all aspects of the process. Issue, manage, and access ERLs from a centralized portal for easy administration, improved processing time, and faster distribution.

- More than 70% cost savings
- Ensure security with electronically signed mail and acknowledgment, archiving with evidential value
- Compliant with the European regulation of eIDAS no. 910/2014 / Article 44 and with decree 2018-347 on the ERL by the ANSSI

Digital Payslip

We offer organizations a centralized system to generate, issue, and manage all payroll-related documents in paper as well as electronic formats. All users, such as employees, HR, payroll managers, etc., can access role-specific information through NF 203 CCFN-certified digital safes.

- Flexibility to disburse either paper or digital payslips
- Meet government, regulatory, and evidentiary requirements
- Easy-to-use management platform with complete traceability and proof of retention

Component Content Management System (CCMS)

Alongside various secure, compliant, and flexible services, CCMS, allows end-to-end tracking. A complimentary service, it offers hybrid management via paper, email, and SMS notifications regarding file transfers, successful deliveries, failed attempts, etc.

Multi-channel

Notifications are sent with different platforms at the same time or in a very short time (spam method).

Cross-channel

Notifications are sent through one channel and reminders, if any, are sent via another channel. This allows for more precise follow-ups.

A detailed close-up photograph of a complex mechanical system. Several interlocking brass gears of different sizes are visible, mounted on a dark, possibly steel, frame. The lighting highlights the metallic textures and the precision of the engineering. The gears are arranged in a way that suggests a sophisticated timing or drive mechanism.

Third-party archiving

Our solution helps public and private organizations manage, monitor, and store administrative, financial, and sensitive corporate information securely. The data can be in different formats, such as text, images, etc., in physical or digital form.

- Streamlined dematerialization with file processing, scanning, archiving, and customer support
- A private, perpetual, and secure management solution with a Business Continuity Plan (BCP) and a Business Recovery Plan (BRP)
- Turnkey solution that can be adjusted according to the client's needs and the functionalities of the Electronic Archiving Service (EAS) and Physical Archiving Service (PAS)

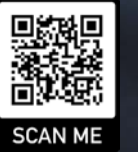

SCAN ME

Guarantee digital document integrity

As the digital revolution accelerates, customer expectations evolve. Daily, a plethora of digital documents circulate globally across private and public sectors. From electronic and paper diplomas to pay slips, the landscape is transforming.

Amid this transformation, assuring the validity of legal digital documents becomes paramount.

Embrace digitization with seamless document verification, catering to the dynamic demands of a digitally-driven world where security and authenticity are at the forefront.

Build trust with Secure Document

A commitment to security!

1. Smart QR Code

Add a unique, tamper-proof QR Code to your documents. In an instant, your customers or partners can access a secure portal to authenticate the document. Reliable, fast, and easy to integrate.

2. Blockchain anchoring

With our Blockchain-based solution, each document is permanently recorded in a distributed ledger. Transparency, traceability, integrity: irrefutable proof that your document is authentic and unaltered.

About

IN Groupe has been a partner to the French government for nearly 500 years, offering state-of-the-art identity solutions and secure digital services that integrate electronic, optical, and biometric technologies.

With dedicated hybrid document management solutions and services, IN Groupe aims to support the digital transformation of public and private administrations.

Our state-of-the-art technology provides high-level security in compliance with European and global regulations, where all data is stored and processed with France.
